AI-Based ASL Fingerspelling Recognition Using the Google Kaggle Dataset for Automated Kiosk Transactions

A Literature Review and Project Application

Introduction

- According to Ethnologue (2023); Mitchell et al. (2006), there are at least 1 million if not more American Sign Language (ASL) users in the United States alone who are a part of the Deaf and Hard of Hearing (DHH) community.
- Fingerspelling is a critical component of ASL and other sign languages, and is used to spell out words, names, and proper nouns that lack direct signs.
- A new dataset release on Kaggle by Google Manfred Georg et al. (2023) has provided a new opportunity to explore how applying AI could improve, assist, and provide options to the lives of the DHH and the wider community?

Methodology

Results: Tables

- Ased Aliquet Luctus Lectus

Table: Table caption.

Treatments	Response 1	Response 2
Treatment 1	0.0003262	0.562
Treatment 2	0.0015681	0.910
Treatment 3	0.0009271	0.296

Aliquam arcu turpis, ultrices sed luctus ac, vehicula id metus. Morbi eu feugiat velit, et tempus augue. Proin ac mattis tortor. Donec tincidunt, ante rhoncus luctus semper, arcu lorem lobortis justo, nec convallis ante quam quis lectus.

Table: Another table caption.

	Location	
East Distance	West Distance	Count
100km	200km	422
350km	1000km	1833
600km	1200km	890

- Vivamus lobortis eros et massa porta porttitor.
